HARNESSING FREE POWER

PV & Batteries

Our expert engineers are committed to delivering reliable systems that deliver CO₂ reductions and cost savings.

For more than two decades Myriad has installed tens of thousands of PV panels and battery systems. The benefits of our expertise, bespoke system designs and dedicated service & maintenance engineers are undeniable.

Bill Reduction – Solar energy will reduce your business electricity consumption and energy cost.

Solar Income – Excess energy can be sold to the grid to provide an additional income stream to your business.

Financial Stability – In times of fluctuating energy costs, generating your own power can safeguard your business and provide peace of mind.

Low Risk Investment - A well-designed Solar PV system can deliver payback on initial investment in as little as 2 - 4 years.

Lower Carbon Footprint – Solar energy can help your business reach net-zero goals, reducing your carbon footprint.

MYRIAD
HEAT AND POWER PRODUCTS

Our Expert engineers have designed and installed 1000s PV and Battery systems saving our customers tons of CO₂ and hundreds of thousands of pounds.

PV & Batteries

Our Suggested Minimum Requirements For Maximum Efficiency

These indicators will ensure your PV system provides a good financial return:

- 3 phase electricity supply to the building.
- Roof area > 250m².
- Electrical demand > 150,000 kWh/yr.
- Roof pitch angle < 25°, although a flat roof and ground areas can be utilised with panel frames to generate the best panel orientation.
- Roof is not facing North, NE or NW. Any other orientation is good for generating.
- Roof not subject to significant shading.

Installation size (kW)	Installation*	Saving Per year**	Payback Years	C saving Tons per year**
100	£ 70,000	£ 23,750	2.9	20
200	£ 130,000	£ 47,500	2.7	39
500	£ 300,000	£ 118,750	2.5	98
1000	£ 550,000	£ 237,500	2.3	197

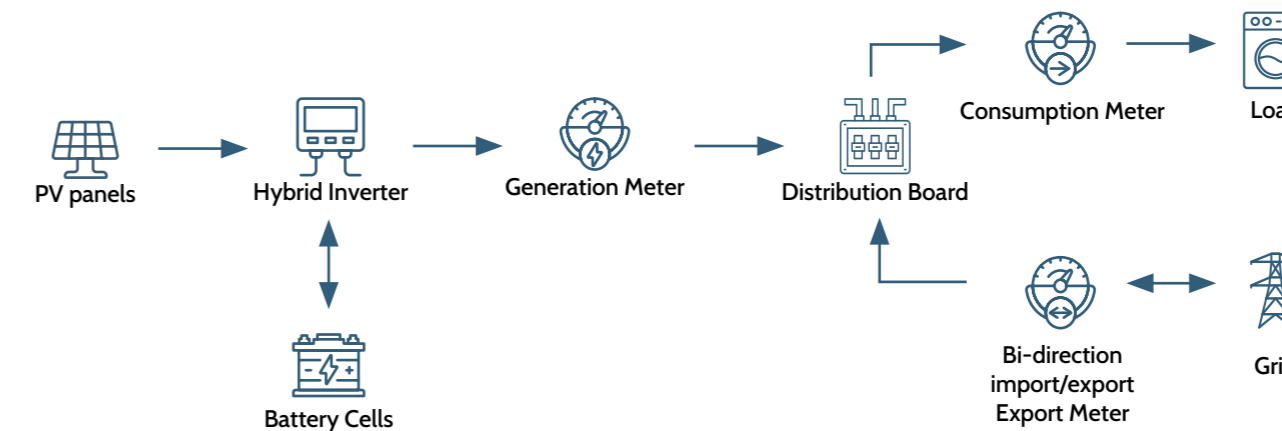

*Typical assuming metal trapezoidal roof
 **Based on switching from grid electricity @25p/kWh

0203 189 0665
 www.myriadproducts.co.uk

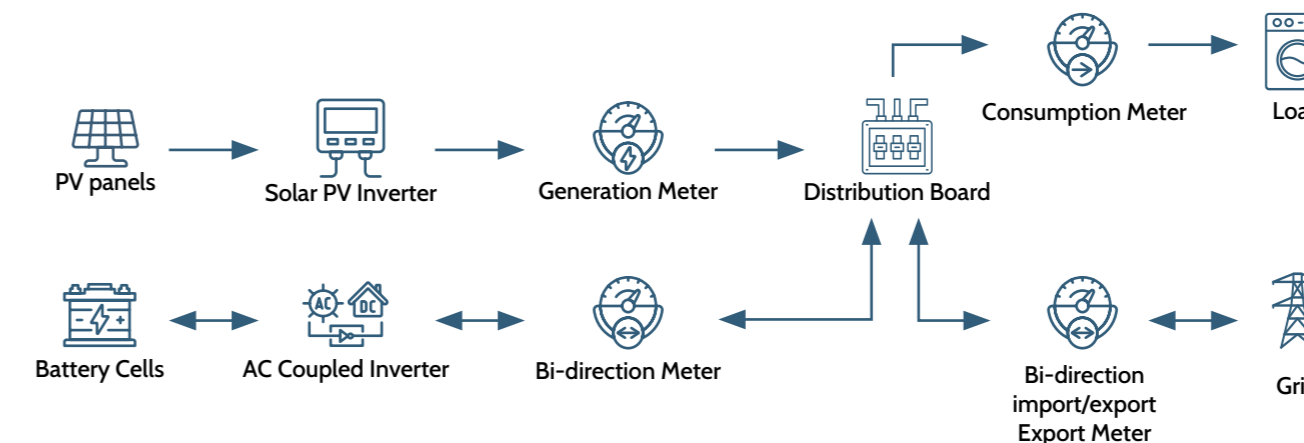

Hybrid System

Hybrid inverters are used for **new PV** installations as they can handle the PV generation as well as the charge/ discharge of the batteries.

AC Coupled

A/C coupled systems are relatively simple charge / discharge systems, used for larger PV installations or on existing configurations to make best use of low night time tariffs.

Our team of engineers can help you during the planning and selection stages, including applying for the grid approvals (DNO) and structural sign offs, as well as installing your chosen battery storage system with new or existing PV systems.

Myriad also provides **maintenance** as required to keep your system optimised.

COMMERCIAL & INDUSTRIAL

Biomass Boilers

Our expertise comes from our experience. Finding the right products and designing the perfect system is what we do.

For more than 20 years we've helped thousands of customers achieve lower cost and lower carbon heating.

Our experts have a depth of knowledge and experience that comes from working with hundreds of customers from every sector and industry. We are committed to assessing a clients' needs and designing the best solutions for reducing energy consumption and costs.

Biomass boilers are tremendously versatile and the perfect choice for a huge number of applications from pools, schools and hotels to horticulture, manufacturing and beyond.

The adaptable nature of biomass boilers, and the wide range of heating outputs (100kW to 5MW) make them an excellent fit for almost any application.

Partnering with Myriad means that you are supported by UK leading engineers, trained and experienced in the design, installation & maintenance of commercial and industrial biomass boilers.

In other words...

...Peace of mind

Our Expert engineers have installed thousands of Biomass Boilers and service more than one thousand every year.

Biomass Boilers

Our Suggested Minimum Requirements For Maximum Efficiency

These indicators will ensure your Biomass Boiler system provides a good financial return:

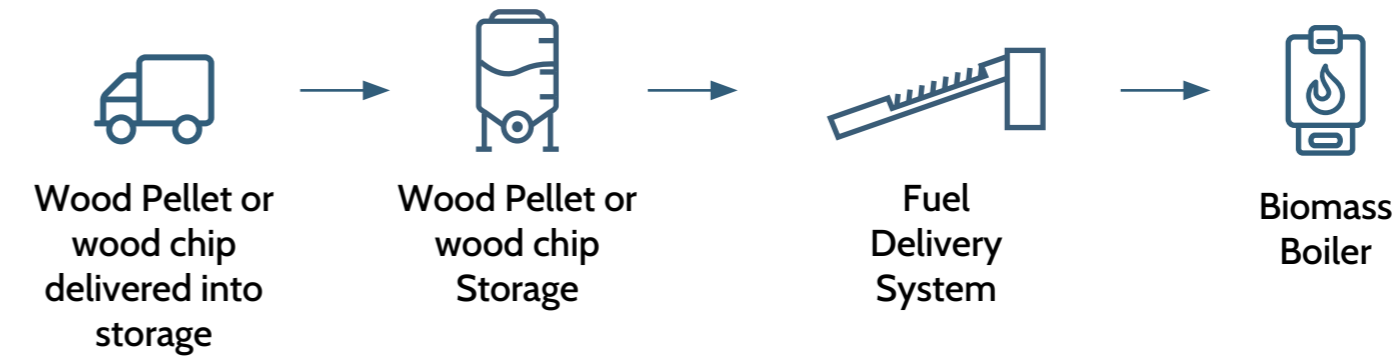

- 3 phase electricity supply to the building.
- Current heating is provided by mains gas, LPG, heating oil, heat pumps or electricity.
- Heating bill is greater than £30,000 per year.
- Space available within 50m of the existing plant room for boiler & fuel storage.

Installation size (kW)	Installation*	Saving Per year**	Payback Years	CO ₂ saving oil (T/yr)**	CO ₂ saving mains gas (T/yr)**
100	£ 60,000	£ 13,000	4.6	52	38
200	£ 100,000	£ 26,000	3.8	104	76
500	£ 225,000	£ 65,000	3.5	259	189
1000	£ 400,000	£ 130,000	3.1	519	379

*Biomass to provide base load heating into an existing wet system
 **Based on switching from oil to biomass chips

Biomass Boiler System

Lower your energy bills, reduce CO₂ emissions, and reduce the stress of dealing with the extreme rises in energy prices from oil and gas.

Delivery

Fuel delivery is extremely flexible and when designing the right system for you we will consider everything from performance requirements to installation space and from site access to location. We will help you choose the right fuel type for you.

Storage

We will design a system that fits your needs and work with you to manage the planning requirements for your store. Minimum volume for storage starts at 5m³ suitable for domestic properties. The upper limit for storage for commercial and agricultural systems can be as large as 200m³.

Fuel Transport

Our expert engineers will design the perfect delivery system for you, ensuring your system reaches maximum efficiency and delivering real savings and reducing your CO₂ footprint

Boiler

Boiler systems for heating, hot water and steam start from 100kW and go up to 5000kW. They are fully automated and easy to manage, either via integrated controls or via remote access.

When designing and selecting your Biomass system, space can be a concern, but our expert engineers are here to help create a tailored solutions that is right for you.

DOMESTIC, COMMERCIAL & INDUSTRIAL

Heat Pumps

At Myriad Heat and Power, we pride ourselves in being able to deliver exceptional quality low-carbon heating systems using the latest technologies

With over 20 years of experience, we've worked with hundreds of businesses and organizations, helping them transition to efficient, sustainable heating systems.

Heat pumps, whether ground source or air source, provide clean, renewable heating and hot water. They harness energy from natural sources, offering exceptional efficiency and versatility. Ground source heat pumps are perfect for delivering consistent heat year-round, while air source heat pumps excel in adaptability, making them suitable for a wide range of building types and industries.

These systems are not only environmentally friendly but also incredibly effective in various settings, including schools, offices, leisure centers, and manufacturing facilities. Their ability to deliver heating and cooling in a single system makes them a standout choice for businesses looking to optimize energy use and achieve long-term savings.

Let us help you embrace the future of heating with innovative, energy-efficient heat pump solutions designed to meet your unique needs. Partner with Myriad and take the next step toward a greener, more sustainable future.

Our latest heat pump project delivered heating and hot water to 82 Properties via 32 boreholes

Pumps Heat

Air Source Heat Pump (single stage)

Air source heat pumps (ASHPs) provide both heating and cooling. They are cost-effective to install, require minimal space, and work well in a wide range of properties, including those with limited outdoor areas.

Ground Source Heat Pump - Shared Loops

For residential systems we often utilise a single ground loop to provide heat for a number of properties. This reduces drilling costs and minimises the amount of ground work needed.

Ground Source Heat Pump

Ground source heat pumps (GSHPs) provide heating, cooling, and hot water. They offer exceptional energy efficiency, often achieving higher Coefficients of Performance (COP) than other systems, they deliver consistent performance year-round regardless of weather conditions.

Twin stage Heat Pump

For high temperature applications twin source heat pumps can be used in series to maximise the energy gathered and increase the temperature of the heating water.

Our expert engineers are here to help create the perfect heat pump solution that is right for you.

Service & Maintenance

Once installed, your plant needs to be routinely serviced in order to ensure it is running efficiently and safely.

Backed up by our team of expert engineers, our customers trust us with the service and maintenance of over 1,000 commercial and industrial biomass boilers and PV systems throughout the whole of the UK.

MYRIAD
HEAT AND POWER PRODUCTS

Keeping your system running efficiently maximises your carbon reduction & fuel cost savings

Biomass Boiler FULL SERVICE

For optimum biomass boiler performance and longevity your system will typically require one full service annually but may require more if your run time is high and/or your fuel is poor quality.

Includes:

Myriad's ultimate cover includes all service elements typically required for maximising the life-time of your boiler:

- Deep cleaning and inspection of the Heat exchanger and combustion chamber
- Monthly maintenance service visit
- Site staff training and skills audit
- Remote boiler and alarm monitoring
- Fuel store maintenance
- Boiler condition report
- Flue cleaning
- RHI heat meter compliance check
- Out-of-hours technical help desk
- Contract management

Biomass Boiler INTERIM SERVICE

We recommend an interim service annually to ensure biomass combustion and emission efficiencies are maintained.

Includes:

Inspection and function testing all control and key components. Testing of combustion phases.

- Monthly maintenance service visit
- Interim boiler service and optimisation
- Flue cleaning
- RHI heat meter compliance check
- Out-of-hours technical help desk
- Contract management

PV Solar ANNUAL HEALTH CHECK

We recommended at least one health check per year to check string integrity, system performance and panel cleanliness.

Includes:

String level tests to ensure all panels are producing the correct level of power generation.

- Panel fixing integrity checks are also available under our bespoke contract.
- Condition and inspection report.
- Advise if annual panel clean is required
- Part replacement service.
- Technical advice and support on your system from experienced PV engineers available throughout the entire year.
